

MIZNA MUZAMMIL

Data Engineer | Python | SQL | ETL Pipelines | Power BI | AI/ML

Sri Lanka / Remote | +94 716 923 298 | misnamusambeer@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

Target Role: Data Engineer - Ateam Software | Available for remote/Sri Lanka-based opportunities | Strong focus on data pipelines, analytics, reporting, and ML-ready datasets.

PROFESSIONAL SUMMARY

Artificial Intelligence undergraduate with hands-on portfolio experience in data engineering, ETL workflows, SQL/SQLite analytics, Python automation, Power BI dashboards, and ML-ready data preparation. Built 30 practical portfolio projects including REST API data pipelines, data warehouse models, fraud analytics workflows, business dashboards, RAG/AI systems, QA automation tools, and documentation packs. Able to clean, validate, transform, store, analyze, and present data for business decision-making and technical teams.

CORE SKILLS

Data Engineering: ETL pipelines, REST API ingestion, CSV/JSON processing, data cleaning, transformation, validation, SQLite storage, structured outputs	SQL & Analytics: SQL queries, joins, grouping, aggregations, fact/dimension tables, KPI reporting, data warehouse basics, dashboard-ready analysis
BI & Reporting: Power BI, Power Query, Excel reports, KPI dashboards, revenue/sales analytics, financial reporting, monthly business reports	Programming: Python, Pandas, NumPy, Scikit-learn, Requests, OpenPyXL, Streamlit, Google Colab, GitHub, VS Code
AI/ML Support: Feature engineering, Random Forest, model evaluation, fraud detection, prediction workflows, joblib/pickle model saving	Documentation & QA: BRD/SRS, user stories, acceptance criteria, test cases, Selenium, Pytest, bug reports, QA audit reports

EDUCATION

Bachelor's in Artificial Intelligence - Pak-Austria Fachhochschule Institute of Applied Sciences and Technology

Advanced Level: Bio Systems Technology Stream | Languages: English, Sinhala, Tamil

FEATURED DATA ENGINEERING PROJECTS

Customer Analytics Data Pipeline and BI Dashboard: Extracted customer/order data from REST APIs and CSV files, cleaned and transformed data with Pandas, stored structured data in SQLite, ran SQL analysis, and generated dashboard-ready business outputs.

Tools: Python, Pandas, Requests, REST API, SQLite, SQL, OpenPyXL, Excel

E-Commerce Sales Data Warehouse and Analytics Dashboard: Designed a mini data warehouse using customer, product, date, and sales fact tables; demonstrated ETL processing, fact/dimension modeling, SQL analytics, and Excel reporting.

Tools: Python, Pandas, SQLite, SQL, ETL, Data Warehouse, OpenPyXL

Financial Transaction Fraud Detection Pipeline: Processed financial transaction records, engineered fraud-risk features, stored clean data in SQLite, ran SQL fraud analysis, trained a Random Forest model, and produced fraud-monitoring outputs.

Tools: Python, Pandas, NumPy, SQLite, SQL, Scikit-learn, Random Forest

Real-Time Weather Data Pipeline and Analytics Dashboard: Built a REST API pipeline to collect live weather JSON data, transform records, store results in SQLite, analyze using SQL, and create report-ready outputs.

Tools: Python, Requests, JSON, Pandas, SQLite, SQL, OpenPyXL

HR Employee Attrition Analytics and Prediction Dashboard: Analyzed employee attrition by department, role, overtime, age, income, and satisfaction; included ML prediction workflow and dashboard-style reporting.

Tools: Python, Pandas, SQLite, SQL, Scikit-learn, Random Forest

POWER BI & ANALYTICS PROJECTS

Sales Performance & Revenue Analytics Dashboard: Built interactive reporting for sales, profit, quantity, monthly trends, categories, segments, and regional performance.

Tools: Power BI, Power Query, CSV, KPI Reporting

Financial Performance & P&L Analytics Dashboard: Created a financial dashboard to monitor revenue, gross profit, expenses, net profit, profit margin, and department performance.

Tools: Power BI, KPI Reporting, Financial Analytics

Retail Data Warehouse & ETL Analytics System: Modeled retail analytics using star schema thinking, fact/dimension design, SQL analysis, and reporting outputs.

Tools: SQL, ETL, Data Warehouse, Power BI

AI/ML AND AUTOMATION SUPPORTING PROJECTS

Real-Time Fraud Detection System using ML: Built a transaction fraud detection workflow with preprocessing, feature engineering, model training, evaluation metrics, and prediction outputs.

Tools: Python, Pandas, Scikit-learn, Random Forest, Joblib

End-to-End MLOps Pipeline for ML Model Deployment: Created a deployment-style ML pipeline with model training, saved artifacts, prediction API structure, Docker-ready organization, and documentation.

Tools: Python, FastAPI, Docker concepts, MLOps, GitHub

AI-Powered QA Automation and Bug Intelligence Platform: Built a QA dashboard that runs Selenium/Pytest tests, captures screenshots, stores test history, and generates AI-assisted bug reports.

Tools: Python, Selenium, Pytest, Streamlit, SQLite

ADDITIONAL PORTFOLIO BREADTH

- AI/ML & RAG: Document QA system, customer support chatbot, AI resume screening system, fraud detection, MLOps pipeline.
- Business Analysis: BRD/SRS documents, user stories, acceptance criteria, diagrams, wireframes, test cases, stakeholder/risk analysis.
- UX/UI Dashboards: AI support dashboard, chatbot builder UI, SIEM monitoring dashboard, resume screening dashboard, SaaS analytics dashboard.

ROLE FIT FOR DATA ENGINEER

- Hands-on project experience with Python, Pandas, SQL/SQLite, REST APIs, JSON/CSV processing, ETL, and data validation.
- Comfortable preparing clean analytical datasets, writing SQL queries, building KPI/reporting outputs, and documenting workflows clearly.
- Strong supporting knowledge in Power BI dashboards, ML data preparation, QA automation, and business requirement documentation.
- Prepared to complete onboarding tests, written assessments, and practical technical tasks with structured, well-documented outputs.
